

**The largest breakthrough in cheque security in over 20 years in cheque paper counterfeit prevention and detection!**

Many experts agree that using high security cheques is a critical component in cheque fraud prevention and there is substantial evidence that high security cheques motivate criminals to seek easier targets. You can't prevent fraud but it can send it elsewhere. One way to accomplish this is to issue your cheques on security-rich cheque paper.

iDNA™ Cheques contain a variety of security features that help deter any alterations or tampering with your issued cheques:

- **Proprietary Covert Marking** – each cheque has its own unique number and can only be seen with ultraviolet light and will not replicate when the cheque is scanned or copied
- **Invisible Fluorescent Fibers** – visible only under ultraviolet light and infused with a rare trace element as each cheque is printed
- **Chemical Reactant Stains** – attempted alterations to your cheque will provide recognizable signs that alert to tampering
- **TonerFuse®II Coating** – locks the toner into the paper to prevent removal, scraping or tape pulling without damaging the paper
- **Line Mark®** - a patented paper machine marking system indicates lines in the paper when any alteration is done

### BENEFITS

CPA 006 compliant

Design online for convenience and faster service

Flexible ordering capability – a variety of colours and cheque placement options available

### Enhanced Security Features:

- Exclusive iDNA™ Covert Marking
- DocuCheck Impede® Security Paper
- LineMark™
- Warning Bands
- Invisible Fluorescent Fibers
- TonerFuse™ II
- Chemical Resistant Stains

With the CPA 006 Compliance deadline fast approaching, it is all the more important to use security-feature rich cheques to deter fraud. The new cheque clearing process means imaging a cheque and then destroying the original before processing for payment through an automated system. This leaves the issuer has no recourse to examine the original cheque and discover where the fraud occurred. With all of the security features and fraud deterrents available with iDNA™ cheques, you are sending the message that you are serious about protecting your cheques.

iDNA™ Cheques are available through on-line ordering in both pre-printed and blank stock. Blank cheque stock offers the most flexibility and cost-effective option for companies with numerous accounts. Both types of stock are available in the following colours and cheque placement options:

### Colour Options:

- Blue
- Burgundy
- Green

### Cheque Placement Options:

- Top
- Middle
- Bottom (preferred cheque placement format for CPA 006 compliance)

### Order on-line

**BANK ON US... MOST HAVE SINCE 1955**

Working with Canadian banks, businesses and various law enforcements agencies to help prevent and investigate cheque fraud since 1955, Paystation offers a comprehensive product line designed to safeguard information and financial assets. The dynamic software application of COBRA for assessing business risk, encrypted cheque-issuing software, exclusive iDNA™ cheques with proprietary security features and protection, as well as high-level security shredders and disintegrators are available to meet your security needs.

\$10 from every iDNA™ Cheque order is donated to the CPA-Robert Warner Memorial Fund. It was established to provide a one-time immediate financial assistance payment to the families of police officers killed in the line of duty.
